OBJECTIVE

Computer Science Engineering graduate with hands-on experience in MERN Stack development, AI-powered applications, and cybersecurity projects. Skilled in building full-stack web applications, deploying local LLMs, and developing security-focused solutions. Seeking a Software Engineer, Full Stack Developer, or Cybersecurity Analyst role.

TECHNICAL SKILLS

Category	Skills & Tools
AI / ML:	Ollama, Retrieval-Augmented Generation (RAG), Vector Databases, Unsloth Fine-Tuning, Local LLM Deployment, AI Agents, Prompt Engineering, Embeddings, LangChain, Hugging Face
Cybersecurity:	Bug Bounty (Bugcrowd), OWASP Top 10, Web App Security Basics, Linux
MERN Stack:	MongoDB, Express.js, React.js, Node.js
Frontend:	HTML, CSS, JavaScript, React, Figma, Spline
Backend/DB:	REST APIs, MongoDB, SQL, Azure
Programming:	Python, C++, SQL
Tools:	Git, GitHub, VS Code

EDUCATION

Bachelor of Engineering (B.E.) in Computer Science and Engineering PSVPEC, Chennai, Tamil Nadu

- CGPA: 7.1/10
- Key Coursework: Data Structures & Algorithms, Operating Systems, Software Engineering.
- Higher Secondary (12th) | Boaz Public School | CBSE | 2022 | 68.2%
- Secondary (10th) | Alwin Memorial Public School | CBSE | 2020 | 65.1%

PROJECTS

AI-Powered Local Coding Assistant (Ollama-based)

- Built an offline AI coding assistant using Ollama and open-source LLMs.
- Implemented Retrieval-Augmented Generation (RAG) using vector databases and embeddings for context-aware responses.
- Fine-tuned open-source models using Unsloth to improve coding assistance and task completion accuracy.
- Integrated LangChain-based workflows for prompt orchestration, document retrieval, and AI automation.
- Optimized local inference using GGUF quantization for efficient execution on consumer hardware.

Bug Bounty & Security Research

- Performed web application security testing using OWASP Top 10 methodologies.
- Identified authentication, authorization and input validation weaknesses.
- Conducted responsible vulnerability disclosure through Bugcrowd.

Low-Cost AI-Enhanced Intrusion Detection and Prevention System (IDPS) Using Raspberry Pi for SMEs

Technologies: Raspberry Pi 4, Python, Suricata IDS/IPS, Kali Linux, nftables, Network Security

- Designed and developed a cost-effective Intrusion Detection and Prevention System (IDPS) using Raspberry Pi to enhance network security for Small and Medium Enterprises (SMEs).
- Integrated Suricata IDS/IPS to monitor network traffic, detect malicious activities, and generate real-time security alerts.
- Developed Python-based automation scripts to analyze security events, classify threats, and trigger preventive actions.
- Implemented automated IP blocking using nftables to mitigate suspicious and unauthorized network access attempts.
- Configured and managed network monitoring, log analysis, and threat detection mechanisms on a Linux-based environment.
- Improved network visibility through real-time event monitoring and security log management.
- Focused on creating a scalable, low-cost cybersecurity solution capable of detecting and preventing common network attacks.

E-commerce Website

- Built a completely responsive e-commerce site with React, Node.js, and MongoDB.
- Implemented user login, product listing, and shopping cart functionality.
- Improved website performance and added secure payment gateway integration.

EXPERIENCE & TRAINING

- Full Stack Developer Intern | HoloTie India Pvt Ltd
Duration, Sep 2025 – Feb 2026
- Developed and maintained full-stack web applications using React.js, Node.js, Express.js, and MongoDB.
- Collaborated on feature development, debugging, testing, and deployment workflows.
- Designed and implemented RESTful APIs for frontend-backend communication.
- Full-Stack Web Development Intern | Pantech Prolabs India Pvt Ltd
Duration, May 2023 – July 2023
- Gained hands-on experience in frontend and backend technologies, directly applying MERN stack knowledge in a professional environment.
- Collaborated on feature development, API integration, and version control using Git.

ACHIEVEMENTS & LEADERSHIP

- Technical Lead, PSVPEC Developer Club: Mentored junior members in Full Stack fundamentals (React, Node.js), fostering collective skill development.
- Organized successful coding workshops and hackathons for the developer community.
- Consistently recognized for high performance in internal coding competitions
